EDUCATION

Wuhan University (WHU)   9.2021-6.2024(expected)
  M.Sc. in Condensed Matter Physics, School of physics
  Cumulative GPA: 3.87/4.00
Wuhan University (WHU)   9.2017-6.2021
  B.S. in Physics (with highest honor), School of physics, TianJuan Program (an Honor Science Program)
  Cumulative GPA: 3.95/4.00
Standardization Examination: TOEFL: 108 (R30+L29+S23+W26)

RESEARCH INTEREST

Topological Band Theory, Driven Quantum systems, Emergent Phenomena in Condensed Matter Physics, Nonlinearity and Topology, Non-Hermitian Physics, Optical Computing

RESEARCH EXPERIENCE

Graduate Student Researcher at Wuhan University
Advisor: Prof. Meng Xiao   9.2021-Present
Braid Topology of Symmetry-Protected Degeneracy Points in Non-Hermitian Systems [1]
- Delved into the braid topology of symmetry-protected degeneracy points in Non-Hermitian systems utilizing homotopy theory, which led to the development of a framework for classifying these singularities
- Overcame the challenge posed by the reduced codimension of degeneracy points
- Revealed counterintuitive topological phenomena through discovery of path-dependent annihilation of degeneracy points
- Completed the manuscript as first author, which was accepted by Phys. Rev. B

The Classification of AIII Class Higher-Order Topological Insulator [2]
Co-*Advisor: Prof. Fengcheng Wu of Wuhan University*
- Proposed and realized a strategy to classify the higher order topological phase of general Hamiltonians with chiral symmetry
- Overcame the lack of correspondence between multipole chiral numbers, quadrupole moment and higher order phase

The Interplay Between Nonlinearity and Topology [3]
- Characterized the topology of arbitrarily designed nonlinear modes by applying numerical K-theory, revealing the stability of nonlinear zero-modes protected by chiral symmetry

- Completed the manuscript as second author, which was under review at Phys. Rev. Lett.

Singular Topology of Scattering Matrices [4]

Co-Advisor: Dr. Cheng Guo of Stanford University

- Leveraged Takagi factorization to explore the singular topology of scattering matrices
- Proved that the continuous Takagi factorization proposed by mathematicians aligns with a parallel-transport gauge

Nonlinear Exceptional Points (NEPs) in Non-Hermitian Systems [5,8]

- Established a theoretical framework of NEPs with a complete eigenvector basis, fundamentally reducing noise, suggesting promising avenues for sensing applications
- Investigated chiral state transfer of a nonlinear exceptional point in presence of Langevin noise

Higher-order Topological Insulators in Photonic Systems [6]

- Formulated an effective Hamiltonian to describe a 3D photonic system and calculated winding numbers of quadrupole moments, providing a theoretic characterization of hinge states in this photonic crystal system
- Explored and characterized the higher-order topology in photonic crystals with crystalline symmetries and its interplay with the orbital degree of freedom

Scattering Theory: A Lens to Understand Non-Hermitian Systems

- Studied the scattering theory and boundary Green function of topological insulators
- Proposed a theoretical model, integrating scattering theory and boundary Green functions, to unearth Non-Hermitian physics—shedding light on the bulk-boundary correspondence in Non-Hermitian contexts

Undergraduate Research Assistant in Wuhan University

Advisor: Prof. Meng Xiao   9.2020-6.2021

Topological Tensor Monopole Using a Synthetic Dimension

- Designed and proposed an experimental approach to actualize a topological tensor monopole in 4D, employing a synthetic dimension

Undergraduate Research Assistant in APM of the Chinese Academy of Sciences (CAS)

Advisor: Prof. Mang Feng   3.2019-8.2019

Trapped Ion Systems as an Approach to Explore Quantum Physics

- Played a pivotal role in advancing a trapped ion system, utilizing Pound-Drever-Hall (PDH) techniques to achieve enhanced stabilization of laser light frequency

PROFESSIONAL ACTIVITIES

Refereeing:

Referee reports for *Physical Review Letters*, *eLight*, *Optica Letters*, *Advanced Photonics*

Conferences:

- The Conference of Condensed Matter Physics (CCMP2023), Liyang, China (Aug. 2023)
- The 13th International Conference on Metamaterials, Photonic Crystals and Plasmonics (META2023), Paris, France (July 2023)

Discussions Involved:

M. Kang et al., *'Applications of Bound States in the Continuum in Photonics'*, Nat. Rev. Phys. 5, 11 (Oct. 2023)

Q. Zhou et al., *'Observation of Geometry-Dependent Skin Effect in Non-Hermitian Phononic Crystals with Exceptional Points'*, Nat. Commun. 14, 4569 (July 2023)

SELECTED HONORS AND AWARDS

- Wang Lao Ji Scholarship, Wuhan University (1/1183)   Oct. 2018
- Blue Moon Scholarship, Wuhan University (1/677)   Nov. 2023
- Graduation with honor: College Graduate Excellence Award, Wuhan University (top 10%)   July 2021
- The Scholarship of an honor Program, Wuhan University (top 10%)   Oct. 2018-2021
- The First Prize Scholarship, Wuhan University (top 5%)   Oct. 2018&20
- The First Prize Academic Scholarship, Wuhan University (top 10%)   Nov. 2023

OTHERS

- **I.T:** Mathematica, Python, Julia, Git, LaTeX
